

COBRA the cutting extinguisher

CCS - COLD CUT SYSTEM AB

The COBRA Cutting Frame

The Cobra Cutting Frame is an integrated attachment to the Cobra Cutting Extinguisher system. The Cutting Frame connects directly to the Cobra power system and is a hydraulically driven cutting head with a nozzle running along a rail. Standard size of the rail is 500 x 500 mm. Other size and shape frames can be manufactured on demand. Cutting speed and direction is remotely controlled via a joystick that can be positioned at a safe distance. The Cutting Frame is used for making escape routes in ships or airplanes, cutting manholes or to empty silos etc.

The pictures show cutting demonstrations for special police forces evaluating the cutting frame for quietly making an entrance to a building during a hostage situation and from Copenhagen airport where succesful cutting tests were performed on a fuselage.
